

telos Leg support

The telos Leg support is radiolucent in the vertical as well as in the horizontal plane.

The precisely manufactured bearings will not wear out the guiding rods - even during long-time use. The adjustability remains smooth-running and the fixation secure.

Standard tourniquets work well with the telos Leg support.

The universal swivel block - which is optional available - allows for adjustments in heights and lateral adjustment with a range of 60° in both directions.
